

Student-Registration-System

Student Registration System using PHP & MYSQL

Student Registration System is a PHP-based web application that allows administrators to manage student registrations. This repository contains the source code for the Student Registration System.

Features

1. Admin Features:- Login | Register | Create a course | Update Fees | Create Batch | Delete Course | View Students in a particular course | View all students in all Batches | Update Batch size.

2. Student Features :- Login | Register | Update Password | Enroll In a course.

Tech Stack

This project built using following technologies:

- Php
- HTML
- CSS
- SCSS
- Bootstrap
- Javascript
- MySQL
- Localhost (XAMPP or WAMP)

Installation Guide

1. Install latest version of xampp on your PC. Run apache and mysql from its control panel.
2. Place the project files in your web server's document root directory (e.g., htdocs for XAMPP).
3. Open localhost/phpMyAdmin. Set up the MySQL database:
 - Create a new database for the project.
 - Import the provided SQL dump file (database.sql) into the newly created database.
4. Access the application in your web browser at <http://localhost/Student-Registration-System>.

Credentials

Username - admin

Password - admin@123

Future improvements:

1. Register new academic staff
2. Manage academic staff registrations
